

Lambdin Coptic

*a revival of the typewriter Coptic in Thomas O. Lambdin's Introduction to Sahidic Coptic
traced from averaged 600 dpi page scans · v1.0, smoothed; 6 % lighter than the typed impression*

Superlineation and morph division

The supralinear stroke is U+0305 (combining overline); the morph-dividing hyphen is the ordinary U+002D.

Fidelity

The same word, typed and revived. Above: **πρωμε** as it appears in the book (600 dpi scan). Below: the same word set in this font at matching letter height.

прѡмѣ
прѡмѣ

Measured against the alphabet table on p. x of the book — held out from the harvest, which used the reading selections, the verbal-conjugation table and lesson exercises:

	this font	best installed	ceiling
glyph-shape agreement	0.882	0.709	~0.95
with proportion	0.878	0.660	
identity rate	1.00	0.83	
stroke weight vs page	0.94	—	
set width vs page	1.00	—	

Best installed = Antinoou, the closest of the 27 Coptic-capable fonts on this machine to Lambdin's page (CS Koptos 0.704; Layton Coptic 0.693 — a different design). Ceiling = what a true match scores against a scan of this quality. Identity rate = share of the 30 glyphs closer to their own typed counterpart than to any other letter. Smoothing alone strips the ribbon spread, leaving 6 % less ink than the impression.

Built from 47,520 harvested glyph instances across 125 pages; 8,762 survived outlier rejection into the averaged templates. Advance widths are medians over 28,667 measured letter pairs — they vary by letter, so this is not fixed pitch. 1000 upem · letter height 620 · descender -265
