

Layton Coptic

*a revival of the Coptic type of Bentley Layton's A Coptic Grammar
traced from averaged 600 dpi page scans · v1.1, smoothed, with widened stroke contrast*

Superlineation and morph division

The supralinear stroke is U+0305 (combining overline); Layton's morph-dividing hyphen is the ordinary U+002D.

αϥ-ψαχε ἡμματα-υ̅ χε-ἡπρ-ρ-ζοτε

Fidelity

The same word, printed and revived. Above: **ΠΟΝΗΡΟΣ** as it appears in the book (600 dpi scan). Below: the same word set in this font at matching letter height.

ΠΟΝΗΡΟΣ

ΠΟΝΗΡΟΣ

Measured against the alphabet table on p. 13 of the *Grammar* – held out from the harvest, which used only pp. 60–540:

	this font	best installed	ceiling
glyph-shape agreement	0.853	0.816	~0.95
with proportion	0.844	0.806	
identity rate	1.00	0.90	
stroke weight vs page	1.08	0.69	
set width vs page	0.968	0.91	
stroke contrast (stem ÷ bar)	6.9	—	

Best installed = CS Koptos Manuscript Unicode, the closest of the 27 Coptic-capable fonts on this machine. Ceiling = what a true match scores against a scan of this quality. Identity rate = share of the 30 glyphs closer to their own printed counterpart than to any other letter. The printed type’s own stroke contrast is 4.4 on this measure and IFAO N Copte’s 10.2; v1.0 (faithful, 0.874) is tagged in git.

Built from 20,202 harvested glyph instances across 112 pages; 7,012 survived outlier rejection into the averaged templates. Advance widths are medians over 10,975 measured letter pairs. 1000 upem · letter height 620 · descender –265
