Superlineation and morph division

The supralinear stroke is U+0305 (combining overline); Layton's morph-dividing hyphen is the ordinary U+002D.

αϥ-ψαχε ḡmmα-γ χε-ḡpp-ḡ-ζοτε

αγω ḡτερε-πcαββατον ογeine μαρια τμαγδαληνη

πρωμε πονηρος μαρια ογḡτε- νανογ-ϥ ετβε-πει-ζωβ ψομητ

Fidelity

The same word, printed and revived. Above: ΠΟΝΗΡΟΣ as it appears in the book (600 dpi scan). Below: the same word set in this font at matching letter height.

ΠΟΝΗΡΟΣ

ΠΟΝΗΡΟΣ

Measured against the alphabet table on p. 13 of the *Grammar* — held out from the harvest, which used only pp. 60–540:

	this font	best installed	ceiling
glyph-shape agreement	0.859	0.816	~0.95
with proportion	0.850	0.806	
identity rate	1.00	0.90	
stroke weight vs page	0.92	0.69	
set width vs page	0.968	0.91	
○ stem ÷ bar (page: 2.68)	2.86	1.9	

Best installed = CS Koptos Manuscript Unicode, the closest of the 27 Coptic-capable fonts on this machine. Ceiling = what a true match scores against a scan of this quality. Identity rate = share of the 30 glyphs closer to their own printed counterpart than to any other letter. Weight 0.92 = 8 % less ink than the printed impression, with the page's own thick/thin ratio kept; v1.0 (as printed, 0.874) is tagged in git.

Built from 20,202 harvested glyph instances across 112 pages; 7,012 survived outlier rejection into the averaged templates. Advance widths are medians over 10,975 measured letter pairs. 1000 upem · letter height 620 · descender –265
